

It is time for a donut (and coffee) break with friends –

Using all the concepts that we have learned throughout the course, create a two – three-page website of your new Donut / Coffee house start-up company. Your Donut/Coffee shop is the best in town and your goal is to make sure your shop's website stands up to its local reputation.

At a minimum your site should contain the following elements (listed in no particular order):

- A git repository
- An external stylesheet(s)
- header
- headings
- paragraphs
- footer
- a navigation bar – nested navigation is optional.
- A consistent page layout
- Classes
- Id's
- Unordered list
- Ordered list
- Links – lots of links!
- All of the images I will provide – feel free to include your own assets as well if you need more images, video, or audio.
- Image wrappers
- Fanciful fonts
- Hover effects
- Appropriate use of CSS positioning
- Appropriate use of semantic HTML tags
- Appropriate use of floats and/or flexbox
- Pseudo-elements
- Pseudo-classes
- Media queries

Ideas for additional pages might include – but feel free to use your own:

- An order form
- A team page
- A dietary commitment statement - with images!
- Donut-coffee pairings/ suggestions
- Weekly showcase page

- Donut-coffee sources/ origin, ie: organic, fair trade, etc..
- Location page
- Contact page
- Reviews / Testimonials
- Partners / local sponsors
- Events page

You are welcomed to use any photo, video or audio manipulation software to customize your assets for your site such as Photoshop, GIMP, Inkscape. Click events are not required – we will cover this once we cover JavaScript in depth, so please do not feel pressured to jump ahead. This project is due on November 19th by midnight, after which we will immediately jump into a group project. Take your time.
